

Helium Balloon Filling Guide

For Hobbyweld Gas Cylinders

Helium is a “searching” gas which diffuses through solids three times faster than air, making it particularly good at “searching” for holes or gaps to leak out of. This is why helium filled balloons deflate faster than air filled balloons – wait until just before your event to blow up your balloons to make sure they last!

Please see below an outline of approximate balloon filling capacity for each of our cylinders.

9 Litre	
9" Latex	160
10" Latex	130
11" Latex	100
12" Latex	80
18" Foil	80

20 Litre	
9" Latex	500
10" Latex	400
11" Latex	320
12" Latex	250
18" Foil	250

DID YOU KNOW?

Our helium cylinders have standard fittings so you can use a universal balloon inflator with them – saving you money not having to purchase specialised kit.
